Pick + Operate

01

Choose task-fit first; use commands deliberately.

WHICH MODEL? / START HERE

LUNA

LOW

Fixed procedures, large batches

Read-only ledger reconciliation.

TERRA

MED

Screens, layout, UX and writing

Compare UI screenshots and labels.

SOL

MED

Multi-file coding and tests

Feature implementation or debugging.

ASTRA

HIGH

Hard decisions, conflicting rules

Architecture or disputed gate logic.

FOUR CODEX COMMANDS / JOB + ACTION

`/init` **SETUP | once per repository**

Creates AGENTS.md; inspect and edit it.

Store boundaries, test commands, review rules.

`/plan` **DESIGN | before risky changes**

Ask for milestones, checks and rollback.

Plan mode first; no code edits yet.

`/goal` **PURSUE | multi-turn work**

Define measurable finish line and budget.

Use: /goal <outcome>; pause / clear when needed.

`/review` **AUDIT | after changes**

Review diff or compare to a base branch.

Fix findings; rerun tests independently.

Flow: /init → /plan → /goal → /review

/plan and /goal are optional; /review is not a test pass.

Think + Check

02

Dial effort up only when evidence warrants it.

REASONING LADDER

LOW

Known rules; deterministic outcome

IDs, formats, comparisons.

MEDIUM

Routine engineering decisions

Scoped code, tests, UI fixes.

HIGH

Hard dependencies or rule choices

Cross-module diagnosis.

EXTRA HIGH

Conflicting evidence; deep review

Threat model; trial vs High.

MAX

Exceptional, measured advantage

Test against XHigh first.

COMPLEXITY SCORE / 0–20

$$S = 2D + 2E + 3R + U + 2V$$

Each factor = 0 low, 1 moderate, 2 high.

D dependencies E evidence R risk
U novelty V verification burden

0–4	LOW
5–8	MEDIUM
9–12	HIGH
13–16	XHIGH*
17–20	MAX*

THREE FAST DECISIONS

Ledger: Luna Low + scripted matching.

Rule conflict: Sol High; cite source.

Live gate: verify + human approval.

*XHigh / Max only after comparative evals.

Luna + Terra

03

Use a simple measurable acceptance check.

LUNA / low-cost throughput

LOW	**Known procedure; quick check**	Ledger matching, extract IDs.
MEDIUM	**Coordinated routine edits**	Repeat a verified edit pattern.
HIGH	**Bounded code investigation**	Trace a few related modules.
XHIGH	**Large rule-bound analysis**	Audit logs against fixed rules.
MAX	**Only if evals improve results**	Compare Sol at Medium first.

TERRA / visual + interface

LOW	**Observe a single UI state**	Check text and alignment.
MEDIUM	**Repair a responsive screen**	Verify before / after images.
HIGH	**Interacting visual defects**	Focus order, clipping, flow.
XHIGH	**Contradictory UI evidence**	Compare specs + screenshots.
MAX	**Only with measured visual gain**	Compare Sol or Astra first.

REASONING IS NOT THE VERDICT

Use **/model** and **/reasoning** to select settings exposed by your version. Availability may vary.

Compare same tasks: pass rate + rework + time + usage.

Sol + Astra

04

Use stronger models for harder judgment.

SOL / everyday engineering

LOW	**Scoped, testable patch**	One-file fix; regression test.
MEDIUM	**Normal agentic coding**	Multi-file feature + CI checks.
HIGH	**Hard interconnected bugs**	Rule collision or race issue.
XHIGH	**Demanding security review**	Threat model; migration risk.
MAX	**Only if evals beat XHigh**	Try Astra at High as rival.

ASTRA / difficult reasoning

LOW	**Concise nuanced critique**	Review settled tradeoffs.
MEDIUM	**Complex bounded design**	Compare architecture choices.
HIGH	**Multiple evidence conflicts**	Diagnose system-level failure.
XHIGH	**Consequential review**	Evaluate gates and trace claims.
MAX	**Measured exceptional value**	No self-certified release gate.

ACCEPTANCE OVERRIDES SCORING

Tests > **confidence.** Source-of-truth rules, observed results and approval control release.

Stop on pass; escalate only missing or failed evidence.
